# The World's Most Powerful Air Sanitizer

[Video](#)

## There is no more guesswork.

The WHO, CDC and Health Canada have confirmed Covid19 transmission through tiny aerosol droplets that linger in the air for hours.

## UVC eliminates pathogens.

With the proper use, UVC can eliminate all pathogens, and has been widely used for nearly 100 years. Sanilume has taken the technology to the next level, allowing for a 20'x20' area to be disinfected about every 2 minutes.

## Our solution is tried and tested.

The world's main governing body for lighting (IES) states that "upper room air UVC is by far the most effective way to eliminate airborne pathogens" and Sanilume is the most effective upper room air UVC fixture on the market.

Sanilume's UVC light is directed to a narrow zone safely above people's heads, and 25,000 cubic feet per hour of air is cycled through the fixture and the pathogen elimination zone.

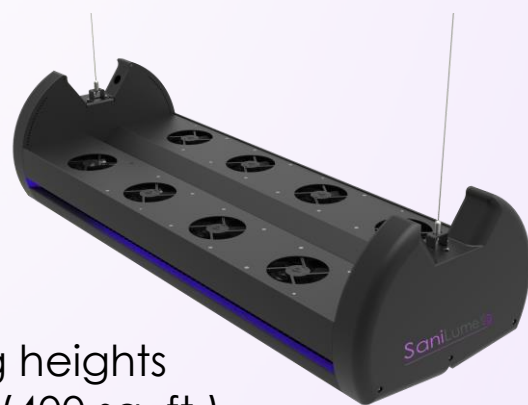

## Peace of Mind

Protect staff and customers from airborne disease while providing peace of mind to everyone in your space.

## Return With Confidence

- Kills any airborne pathogens
- Adjustable UVC output for different ceiling heights
- Equivalent air change about every 2 min. (400 sq. ft.)
- Clean sleek modern design
- One fixture will disinfect approx. 400 sq. ft
- Safety certified
